Desktop Dashboard – Key Insights

Energy Overview

- North Zone records the highest total energy consumption.
- Industrial consumers are the primary drivers of overall demand.

Monthly Trend

- Energy consumption shows steady growth with minor seasonal spikes.
- Demand patterns remain stable without extreme volatility.

Peak Usage

- Weekday peak usage is higher than weekends.
- Industrial zones show elevated peak load risk.

Revenue & Cost

- Central Zone generates the highest estimated revenue.
- Cost trends closely follow total energy consumption.

Reliability

- High-consumption zones also report higher outage minutes.
- Certain meters require maintenance due to repeated faults.

Mobile View – Summary Insights

- Total consumption is dominated by industrial users.
- Peak usage highlights concentrated hourly demand.
- Outage metrics indicate reliability concerns in select zones.
- Filters allow dynamic zone and consumer analysis.

Executive Summary

- Energy demand is industry-driven.
- North Zone shows highest infrastructure stress.
- Peak management and preventive maintenance are recommended.
- Tariff structure directly impacts revenue distribution.
